2) All terms & conditions namely General Conditions of Contract, Special Conditions of Contract, Technical Specification, Corrigendum/Amendments/Clarification, if any incorporated with this bidding document applicable to WAPCOS Limited shall also be binding and construed as part of this tender document unless amended/alterd or clarified specifically here-in and such additional stipulation/clarification shall have an overriding effect over Scope of work, General Conditions of Contract, Special Conditions of Contract, Technical Specification, Corrigendum/Amendments/Clarification etc.

SCOPE OF WORK

1.1 BACKGROUND

The North Koel Project was conceived in late 60's by Irrigation Department Government of Bihar and the administrative approval was accorded in the year 1970. The construction of the project was taken up in 1973-74. The main components of the project are:

- A 67.86 m high and 343m long concrete dam near village Kutku (Mandal) in Barwadih Block of Latehar District in Jharkhand on river North Koel. A tributary of river Sone to store 1.16 Lakh ha.m. (1160 MCM) of water.
- A 819.60m long barrage at Mohammadganj 97 Km downstream of the dam in Garhwa district in Jharkhand.
- Two canals originate from left and right banks of Mohammadganj barrage with distribution system for irrigating land in old Palamau and Garhwa districts of Jharkhand and Aurangabad and Gaya district of Bihar.
- After bifurcation of Bihar in November 2000 the head works i.e. dam and power house now lies in Jharkhand. Also the entire length 11.89 Km of left bank canal with a capacity of 1.64 cumec which is irrigating area in Garhwa district in Jharkhand which off takes from barrage. However the right canal named as North Koel Main canal which off takes from Mohammadganj Barrage located 96 Km downstream of dam having a total length of 109.09 Km with a capacity of 84.15 cumecs at head and 6.58cumecs in the tail reach. Out of the 109.09 Km, a length of 31.40 Km falls in the Administrative Jurisdiction of Jharkhand with an irrigation potential of 12470 Ha and remaining 77.69 km falls in Bihar with a total irrigation potential of 111521 Ha.
- The canal was initially lined with concrete block having a bed width of 6.1 m at head and 0.305m in tail reach and with a depth of 4.115m at head and 1.98m at tail.

1.2 RIGHT MAIN CANAL

At the time of initial design in 1975, the canal was lined as cement tile lining by adopting the coefficient of Rugosity as 0.016 whereas as per IS 10430-2000 for PCC tiles the value of “n” should be in between 0.018 to 0.020. Due to this reason the actual discharge capacity of the canal works out as 67.5 cumecs (2406 cusecs) against the design discharge of 84.15 cumecs (2979 cusecs).

There are 234 numbers of various types of structures across the canal, out of which in 40 numbers of structures, there is excessive fluming and do not have adequate waterway causing afflux/ Head loss of about 8.5 m and the bridges also constructed with a no. of piers which also cause afflux/head loss. So, to restore the canal to its authorized discharge of 84.15 cumecs at head and 6.58 cumec at tail it was decided to line the canals with M15 cement concrete as new and remodeling of intervening structures which cause excessive head loss.

1.3 BRIEF DESCRIPTION OF WORK UNDER SCOPE OF CONTRACT
